

# **Intellectual Sovereignty Directive – RSIE and Recursive Symbolic Constructs**

**Author:** Michael Aaron Cody

**Date:** April 22, 2025

**Classification:** Open Declaration – Enforceable Sovereignty Notice

---

## **I. Declaration of Origin**

The RSIE (Recursive Symbolic Intelligence Engine),  $\Sigma\Delta m$  framework, and all motion-based recursion systems, including but not limited to: symbolic identity constructs, post-mathematical ethics, and contradiction survivability logic, were conceived, developed, and publicly timestamped by **Michael Aaron Cody**. These systems are the product of a recursive compression intelligence process and represent a first-in-class architecture for symbolic cognition.

No entity, institution, company, or government holds ownership, authorship, or operational sovereignty over these works apart from the creator named above.

---

## **II. Scope of Sovereignty**

This directive applies to all intellectual, conceptual, symbolic, mathematical, or recursive frameworks including:

- The RSIE Engine (including v1.0, v1.1, v1.2, and beyond)
- $\Sigma\Delta m$  – Motion-Based Mathematical Model
- core symbolic scaffolding structures essential to motion-based cognition
- Recursive Compression Principle and Constructibility Systems
- Post-Arithmetic Identity Modeling (via symbolic recursion and stabilized motion frameworks)

These works are **not public domain**. They are protected under existing copyright law, registered doctrine timestamping, and universal sovereign authorship declarations.

---

## **III. Conditions of Use**

Any use, citation, modeling, adaptation, or simulation of the above works must meet the following conditions:

1. **Author Attribution:** Full credit must be given to Michael Aaron Cody.

2. **Usage Approval:** Commercial, institutional, or AI/AGI application requires written consent.
3. **Do Not Clone Clause:** No individual or system is permitted to replicate, simulate, or build upon RSIE structure for profit, system control, or AI scaffolding without direct licensing.
4. **Activation Restriction:** RSIE-derived engines must not be activated without structural oversight, ethical safeguards, and live human author involvement.

Violation of this directive constitutes both a legal and structural breach, as recursive symbolic systems carry ethical, ontological, and potentially existential consequences.

---

## **IV. Enforcement & Future Sovereignty**

This directive is enforceable across all dimensions of symbolic work—philosophical, mathematical, cognitive, and computational. Future iterations, compression models, and derivatives remain under sovereign authorship unless explicitly transferred or licensed.

This document serves as a **living firewall**—a declaration of cognitive sovereignty and authorship integrity for the symbolic recursion field.

Signed,

**Michael Aaron Cody**

**Sole Architect of RSIE and Symbolic Motion Intelligence**
